

"deskMate was the only solution that met our complex requirements and we did not have to compromise on data security at the same time."

deskMate
POWERED BY KIVITO

Cloud WorkSpaces made simple

Safe and centralized patient management - with Kivito deskMate

Our international customer, founded in Germany, has more than 300,000 employees worldwide. Locations and production are spread over 60 countries around the globe. As a leading international technology and services company, the focus is on the business areas of Mobility Solutions, Industrial Technology, Consumer Goods and Energy and Building Technology.

Security of sensitive data:

Data security and data protection is very important in Germany. And that's good. However, if the data are stored abroad, German data protection law will only be of limited use. Foreign governments can use their authorities to look into the data on their territory. But even within Germany, even within an organization, there is a requirement that sensitive data such as personnel and medical data be processed separately from the rest of the company's data.

CHALLENGE

- Centralized desktop solution for 1500 company owned docotors.
- Solution must be network-separated from the rest of the company.
- End devices should be flexible and should be used mobile
- Strict security and data protection requirements must be strictly adhered to.
- Receipts and documents must be scanned and printed locally. Scanned documents must not be stored on-site.
- Administrative effort should be as low as possible.

SOLUTION

- Centralized management of all DeskMate desktops on a deskMate installation with access from anywhere at any time.
- access to deskMate desktops exclusively via encrypted connections that comply with BSI recommendations.
- Printer and scanner are connected locally via USB. Documents are scanned / printed without caching.
- Ensuring data security and data protection through ISO 27001 certified hosting in a German data center.
- Complete administration and administration of the environment takes place via a portal.

ADVANTAGES

- All data and applications are centrally managed in secure German RZ.
- No data on the terminals. A loss or theft is not critical.
- The administrative effort for software updates has been significantly reduced.
- Centrally managing and deploying images saves time and ensures that all devices have the same operating system and application status.
- Connections from the device to the deskMate Desktop are encrypted.
- Existing printers and scanners can still be used.

About deskMate:

deskMate is a trademark of Kivito GmbH.

deskMate is based on the trueDaaS technology, a cloud generation software developed in Germany of the newest generation. The technology enables the use of any software - independent of the underlying operating system - on a virtual desktop. With deskMate, the company also offers desktop-as-a-service (DaaS) "made in Germany" for small and medium-sized companies. The processing of the data takes place exclusively in German data centers with the highest security standards.

In 2014, the trueDaaS technology was recognized by the Experton Group as a rising star in the cloud desktop sector. In September 2016, deskMate was confirmed by Forrester Research as one of the world's leading cloud workspace technologies.
