IT for non-profit organizations - with Kivito deskMate

The non-profit organization Africachild e.V. from Augsburg, which is recognized as a charitable organization, has been involved in the fight against poverty and illness in Africa since 2001. The organization helps children mothers and street mothers who are outcast, orphaned and victims of violence and marginalization. Employees and volunteers look after young mothers and their children both from Germany and directly in Africa.

IT in non-profit organizations:

Increased legal requirements in terms of data protection and data security are causing headaches for many non-profit organizations. Especially they have no solid structures because of many volunteer or campaign-related employees. Properly administering the operating system and MS Office licenses requires enormous effort. Information is often stored locally instead of centrally. In smaller organizations, often on private devices that are outside the reach of the IT department. Collaboration on projects often takes place by sending files back and forth.

CHALLENGES

- Secure processing even from private computers without the installation of programs or modules.
- Availability of all necessary information for all organs of the organization.
- Flexible subscription and withdrawal of campaign worker desktops
- Ensuring the up-to-dateness of the data while ensuring data security and data protection.
- Access to programs and files also from project locations also in Africa.
- Billing incl. Operating system and MS Office licenses for low-cost, monthly variables instead of fixed costs.

SOLUTION

- Central management of data on a deskMate installation with accessibility from anywhere at any time.
- Each authorized user can access the data that is important and up-to-date for him without installation.
- The software is centrally installed and maintained. License and conversion problems eliminated - The security of member data is increased.
- Ensuring data security and data protection through ISO 27001 certified hosting in a German data center.
- The use of club data and software is independent of the user's operating system and end device.

ADVANTAGES

- Africachild e.V. employees can access the organization's data and programs from their location.
- BYOD (Bring Your Own Device) does not require the purchase of expensive devices.
- Users can be added or removed as desired, e.g. In the case of a change of employees or tasks, the handover is facilitated because no data exchange is required and only user rights have to be changed.
- Administration and license costs are significantly reduced.
- Sensitive data is never on the employee's endpoints, but always stays in the secure data center.
- All data is kept central and regularly backed up.

About deskMate:

deskMate is a trademark of Kivito GmbH.

deskMate is based on the trueDaaS technology, a cloud generation software developed in Germany of the newest generation. The technology enables the use of any software - independent of the underlying operating system - on a virtual desktop. With deskMate, the company also offers desktop-as-a-service (DaaS) "made in Germany" for small and medium-sized companies. The processing of the data takes place exclusively in German data centers with the highest security standards.

In 2014, the trueDaaS technology was recognized by the Experton Group as a rising star in the cloud desktop sector. In September 2016, deskMate was confirmed by Forrester Research as one of the world's leading cloud workspace technologies.
