Cloud WorkSpaces made simple

Flexible solutions for club management - with Kivito deskMate

Since 2001, our supraregional active customer has been the contact person for all questions concerning EDP. As a Stuttgart-based full-service provider, the team of 12 employees provides all services from a single source: hardware, software, ongoing maintenance and support. The focus is on solutions for club management for medium-sized clubs or associations.

Club Management:

Effective club management is currently becoming more and more important given the scarcity of time and personnel resources and the increased demands imposed by law.

The prerequisite for this is the availability of all necessary information for all those working in the club administration, whether honorary or full-time, which ideally should also be independent of time and place.

Difficulties often occur in the timeliness of the data and in connection with the exchange of the most sensitive data, which must ensure the privacy and can not be done by unencrypted emails.

CHALLENGES

- Secure processing even from private computers without the installation of programs or modules.
- Availability of all necessary information for all organs of the association.
- Ensuring the up-to-dateness of the data while ensuring data security and data protection.
- Independence in the choice of club software must be maintained.
- Billing via monthly variable costs instead of fixed costs.

SOLUTION

- Central management of data on a deskMate installation with accessibility from anywhere at any time.
- Each authorized user can access the data that is important and up-to-date for him without installation.
- The club software is centrally installed and maintained. License and conversion problems eliminated - The security of member data is increased.
- Ensuring data security and data protection through ISO 27001 certified hosting in a German data center.
- The use of club data and software is independent of the user's operating system.

ADVANTAGES

- Organizations with offices can also access the data in a location-independent manner and thus make the same services available, for example in the field service of employees or the assumption of tasks by third parties.
- Users can be added or removed as desired, e.g. when changing in the club management the transfer is facilitated because a data exchange is omitted and only user rights are to change.
- The administrative effort for EDP is significantly reduced.
- Editing the club data on private computers does not pose a risk, even in Viktor infestation, because they can not be transferred to the target system.

About deskMate:

deskMate is a trademark of Kivito GmbH.

deskMate is based on the trueDaaS technology, a cloud generation software developed in Germany of the newest generation. The technology enables the use of any software - independent of the underlying operating system - on a virtual desktop. With deskMate, the company also offers desktop-as-a-service (DaaS) "made in Germany" for small and medium-sized companies. The processing of the data takes place exclusively in German data centers with the highest security standards.

In 2014, the trueDaaS technology was recognized by the Experton Group as a rising star in the cloud desktop sector. In September 2016, deskMate was confirmed by Forrester Research as one of the world's leading cloud workspace technologies.
